

**Model 3604-TROL  
Trolling Valve Control**

This control provides a simplified solution for controlling your trolling valve. It is made entirely out of silicon bronze and stainless steel and will give you years of trouble free service. To accomplish this, we have modified our 3604 pneumatic control to accept a push-pull cable. The control is very small in size with a 3" x 3" base and a handle height from the mounting surface to the top of the handle in its highest stroke of 3 7/16". It has an adjustable stroke and a friction adjustment for the lever arm tension. This control comes complete with all the parts shown except for the cable. It can be used with either 33 series or 43 series cables.
